MET CENTRAL EUROPE HUNGARY

Our energy experts continuously monitor and analyse the current industry trends and create innovative and optimal products and service solutions composed for our partners' needs.

5500+

business partners

Agriculture

Paper industry

Metallurgical industry

Construction

Energy efficiency

Natural gas

Power

We build long-term cooperations with more than 5,500 business partners, present in almost every industrial sector in Hungary. MET Central Europe Hungary provides progressive business solutions for small and medium-sized enterprises, industrial and large corporations and state-owned institutions as well.

ENERGY EFFICIENCY

Our services tailor-made for our partners highly contribute to their efficient consumption of the energy being essential to their operation, cost optimization and reducing business risks, strengthening their competitiveness.

ENERGY CONSULTING / ENERGY ASSESSMENT

Mapping the options for energy efficiency actions of energy efficiency possibilities, design and support for investment projects, optimisation of energy consumption processes, and support of energy management system implementations.

ACCOUNTABLE ENERGY EFFICIENCY SOLUTIONS UNDER THE HUNGARIAN ENERGY EFFICIENCY OBLIGATION SCHEME (EEO)

In case of measures and projects aimed at more efficient energy consumption, concluded by auditing and authentication, we ensure our partners the accountability under the Hungarian Energy Efficiency Obligation Scheme (EEO).

CORPORATE ENERGY AUDIT

In accordance with the energy efficiency regulations, companies with a total energy consumption above 10 TJ are audited for energy efficiency. Assessment of the state of buildings and technological systems with expert proposals for energy optimisation measures using complex and tailor-made solutions. Obligatory energetics assessment of technological systems.

ELECTRICITY STORAGE OPTIMISATION

After careful examination of the energy consumption of the company we compile a proposal to optimize the client's electricity grid contract, in order to make the adequate reserved capacity matching consumption available to the client, and optimizing the distribution system tariffs.

METERING AND MONITORING SOLUTIONS

In addition to measuring energy consumption points, we provide support for implementing complex energy management (storage, analysis and forwarding of metering data). The system thereby devised also supports the efficiency and safe operation of production processes.

CONSULTANCY SERVICES

The fundamental objective of our monthly regular service is to strengthen the energy efficiency-oriented mindset throughout our client's company in the daily operation, strategic planning and aiming to comply with the legislative framework.

SOLAR PANEL SYSTEMS

Turnkey design, licensing and implementation of systems exceeding the capacity of small household power plants to enable our partners to make optimal use of power generated using from renewable sources.

Partnership and dialogues are the key components of the future cooperation between customers and traders in the world of energy, where MET Central Europe Hungary provides energy products and services securing the sustainable and successful operation of our clients.
